------ Project Information

Center project Information Center project name: L9625 Center clone name: 684_C_2

MOTE: This record contains 77 individual sequencing reads that have not been assembled into contigs. Runs of N are used to separate the reads and the order in which they appear is completely arbitrary. Low-pass sequence sampling is useful for identifying clones that may be gene-rich and allows overlap relationships among clones to be deduced. However, it should not be assumed that this clone will be sequenced to completion. In the event that the record is updated, the accession number will

be preserved. 9616 6099 2508 2607: 760 859: gap of 100 bp 1626: contig of 767 bp in length 97 3496; gap of 100 bp 100 pp 100 bp
